Pneumatics Trainer

This STEM learning package has been designed to provide practical real world problem solving tasks and activities within the classroom or lab environment.

The Pneumatics Trainer offers a classroom-based resource for practical investigation of pneumatic components and systems.

The trainer consists of a two-part rig, the first of which allows users to connect components to create fundamental circuits. The second element is an electro-pneumatic sorting system that brings together electronic sensing, actuators and logic gates to sort clear and black parts into different bins.

This resource is supplied with a curriculum CD containing practical tasks and activities, as well as tutor support materials.

The trainer can also be used in conjunction with our optional cloud-based software packages, which offer online practical tasks as well as interactive theory presentations, investigations, and assessments, which link directly to the practical activities carried out using this resource.
